

Eyes on U™

Our new line of Smart Tags includes both EAS and RFID technology. EAS Smart Tags based on WG's popular Wave technology incorporate RFID technology to facilitate inventory control via WG's database management software.

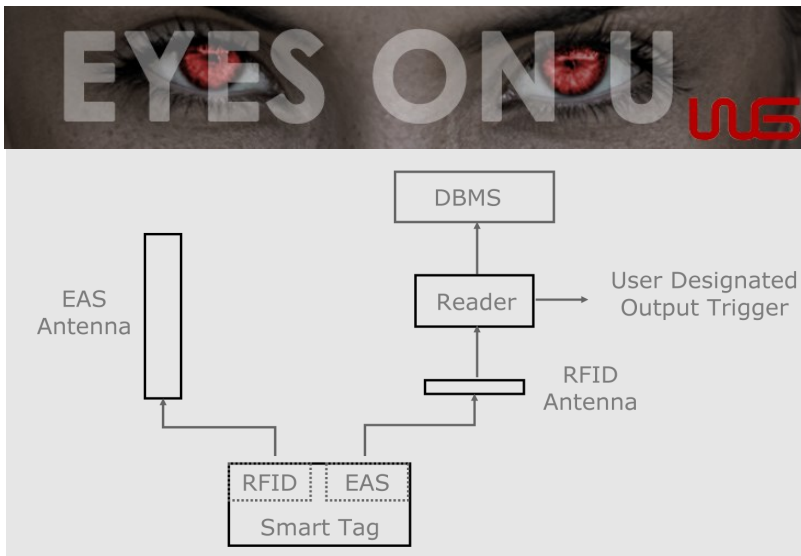

EAS technology causes the Smart Tags to self-alarm and sets off alarms at points of egress. With WG's Wave Technology, the Smart Tags will also self-alarm when tampered with or removed prior to disarming.

RFID antennae and readers detect the tags for inventory control, and partner with security systems at exits.

Database Management Software is an inventory management tool that logs activity at exits.

Theft Prevention:

- ◆ Increase your level of security
- ◆ Manage your inventory
- ◆ Minimize cost with an EAS/RFID combination system

Flexible configuration
