

# Sentinel™

Sentinel works as a standalone system or in conjunction with your EAS system. This unique technology is designed to contain merchandise within a specified area without the use of cables or lock-up cabinets. Sentinel uses radio frequency in our “Radiate-and-Detect” (RAD) readers to communicate with tagged items within a secure perimeter; tags leaving the Sentinel-approved area will cause both the system and the tag to alarm.

## Four Components:

- ◆ Field RAD
- ◆ Sentinel Tag
- ◆ EAS
- ◆ Sales RAD

A complete Sentinel system,

### Features:

- ◆ Readers radiate with a strength-adjustment range of up to 65 feet of coverage.
- ◆ Readers installed overhead so the space’s layout is not altered
- ◆ Wireless RAD installation for maximum flexibility
- ◆ EAS RAD includes a built-in speaker for additional alarm
- ◆ Sales RAD communicates with the Sentinel tag to arm or disarm and incorporates a magnetic detacher for quick and easy use at point-of-sale.
- ◆ Compatible with all RFID-enabled WG Tags, with an option to include EAS compatibility.

Sentinel can be used  
for monitoring  
products, supplies, and  
even people!
