

VIDEO INTEGRATION BY WG

Securing Today for a Profitable Tomorrow

A fully integrated video system is an important weapon in your risk management arsenal. A properly designed and installed system will help you protect your company's assets and premises, increase the safety of your staff, review operational and merchandising protocol in addition to deter and detect theft.

Remote Video

By using either networked or remote video management software, you can receive streaming video from select store sites. Remote video management allows you to monitor store activity from anywhere without traveling to the site, saving time and expense. Depending on the recording platform you may also download system upgrades, video files, pull exception reports for investigation, and manage system programming.

Adaptability

Whatever you need, WG Security Products Inc. has the video solution for you. We will work with you to design and implement a video system tailored to your specific requirements. We supply and install a complete range of video products from the lower end to fully integrated operating systems. Our video systems can even be integrated with your EAS system to monitor alarms and gain valuable information.

Innovation & Products

Video innovations such as our track camera system, an IP camera on a rail system designed to travel the length of stores, put WG at the head of the pack for video technology.

Whatever product you need or desire, WG has it. PTZ, analog, digital, domed, outdoor, indoor: our selection of cameras is second to none. We also stock diverse options in Public View Monitors (PVM), Digital Video Recorders (DVR) and Network Video Recorders (NVR) for every business of every size.

For over a decade, WG has been putting its expertise and experience to use as a reliable video solutions provider for businesses of all kinds. Contact WG for a consultation and a free quote to help you secure your business and provide your customers a safe atmosphere.
