

# Microshell with ink™

*Multiple layers of protection*

One of WG's most popular tags, the Microshell tag with ink, displays many features that make it the most reliable EAS tag in the industry today. Featuring a patented shell design with a sleek, rounded edge, the Microshell with ink is highly tamperproof, making illicit removal of the tag almost impossible. The tag employs dual alarming technology where the tag can be detected by both 58 kHz and 8.2 MHz systems. One large ink-filled ampoule offers benefit denial protection. The Microshell with ink can also be enabled with RFID technology, making WG the only company manufacturing tags that provide these 4 distinct levels of security. The Microshell with ink is currently in use at stores such as bebe, BCBG, Donna Karan and other high end retailers.

*The first tag to feature AM/RF/RFID technology in one package!!*

- Compatible with any 58 KHz and 8.2 MHz EAS system
- Can be enabled with an RFID coil to track product movement
- Sleek design makes tag nearly impossible to remove without a detacher
- Superlock mechanism
- Visible ink ampoule serves as fourth level of security and deterrence.
- Perfect for all garments, ranging from high-end to department store.
